

ISSUE SUMMARY:

#DoublePell: A Proven Investment

No program authorized under the Higher Education Act of 1965 has had more success or impact than the federal Pell Grant. A proven program that has been the foundation of federal student aid for decades, the Pell Grant unlocks the doors of higher education and opportunity to students of low- and moderate-incomes with a maximum annual award of \$7,395. Since 1972, more than 216 million students have received a Pell Grant. Undergraduates at regional comprehensive universities (RCUs), which are composed of 517 four-year public colleges and universities, were more likely to be Pell recipients (38%) than undergraduates at non-RCUs (25%).

Pell Grants effectively create pathways for students to earn a degree, join the workforce, and achieve greater social and economic mobility. Yet, the maximum award has not kept up with the rising cost of postsecondary education or inflation for decades. Students today face challenges far beyond their control, but greater increases to the federal Pell Grant is a sustainable, long-term solution.

#DOUBLEPELL

AASCU joins fellow members of the Double Pell Alliance in calling on Congress to strengthen this proven investment and double the maximum Pell Grant award to \$13,000.

Targeted and Means Tested

From its inception over half a century ago, the Pell Grant program has always been a precise and tested federal benefit based primarily on a student's expected family contribution and the cost of attendance (COA). Yet, it has not kept up with inflation and the needs of today's students. Doubling the maximum Pell Grant to \$13,000 represents a crucial opportunity for investment that increases postsecondary access and affordability for current and future students with the greatest financial need.

FAMILY INCOME OF THE 6.4 MILLION 2019-20 RECIPIENTS**78%**

Percentage of Pell Grant recipients whose families earn \$40,000 or less annually - nearly half had income less than \$20,000.

39%

Percentage of Pell Grant recipients that came from families whose annual income fell between \$20,001 and \$50,000.

93%

Percentage of Pell Grant recipients that came from families that earn \$60,000 or less.

If Congress were to #DOUBLEPELL, it is estimated that a maximum Pell Grant would pay for over half of tuition, room, and board at a public four-year institution.

Provider of Opportunity

The Pell Grant is especially critical to those Americans who make up the “new majority” of college students: low income, first generation, persons of color, working adults, and/or veterans. For these students, receipt of a Pell Grant double its current value can make the difference between an affordable opportunity and carrying debt when attempting to access a postsecondary education.

WHO RECEIVES PELL GRANTS?

50–60% of students of color

Nearly 60% of Black students and roughly half of American Indian or Alaska Native and Hispanic or Latino students receive a Pell Grant each year.

50–56% of first-gen students and student parents

Attainment of a college education is possible for half of first-generation college students and 56% of student parents because of Pell Grants.

40% of veterans

Almost 40% of student veterans are Pell Grant recipients.

Reduces Debt, Fights Inflation

The cost of college tuition and its corresponding debt are widely known as the largest barriers to economic mobility and wealth generation for young Americans. While RCUs continue to provide a strong return on investment for students, families, and taxpayers, a steep decline in state and local investment coupled with increased operating costs and decades-old infrastructure maintenance have required tuition increases.

Doubling the maximum Pell Grant is one of the most direct ways Congress can ensure the success of students today and tomorrow. The outcome is mutually beneficial in that it empowers both students and communities. Lawmakers can even return some of the grant's purchasing power by decreasing the need for burdensome and potentially high-interest loans that leave students and families drowning in debt.

47 percentage point drop

At its peak in 1975, the maximum Pell Grant covered 79% of tuition, room, and board for a public four-year institution; in 2023, a maximum award would only cover 32% of costs.

55% increase in average award

Since 2000, the average Pell Grant awarded increased 55%, culminating in an average award of \$4,500 in 2019–2020 for public four-year Pell recipients.

26% attendance costs covered

The present maximum Pell Grant in 2021–22 covered only 26% of the cost of attendance at public four-year institutions.
